

FAASTeam presents:

Mountain Flying

Flying in the mountains is some of the most amazingly beautiful and satisfying flying you may ever accomplish. It doesn't come without increased risk and responsibility. GA pilots safely calculate and plan for such risks every day, and you can too. Join us for an overview of elements of mountain flying. In this seminar, we will announce an upcoming trip to Yellowstone and Idaho as an example trip. We'll look at how terrain and mountain weather patterns affect one another and what that means to small airplanes. We'll discuss density altitude in terms of how to calculate it and what it means for landing and departing high altitude mountain airports. And no mountain flying discussion is complete without emergency preparedness and survival gear. This seminar also serves as a pre-trip briefing on the planned Yellowstone Mountain Flying Adventure of late June being organized by the Bay Area FlyOutGroup (FOG.) We will use the routing of that trip to highlight the talk, but this session is open to non-participating pilots who wish to obtain the ground instruction related to a mountain checkout. Presenter Adam Kelly is a flight instructor and regular safety seminar speaker at San Carlos Flight Center. He has been in love with aviation since he was a child, and comes from a family of accomplished
